**ALL TERRAINS**

Little or no preparation needed on just about any surface.

- Member of the German Horse Industry
- Durable riding and lunging halls
- Premium quality & safety
- Qualified personal consultation

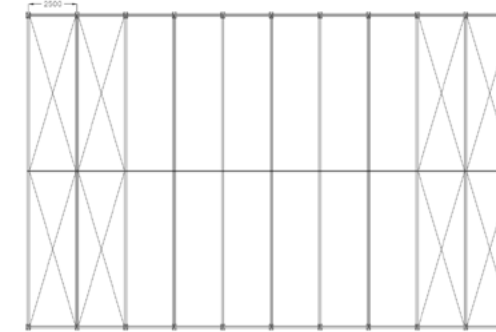

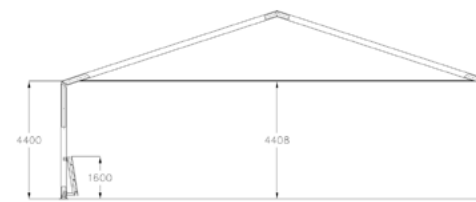

## Riding Halls

Riding halls from equitent convince clients both visually, qualitatively and financially. The riding hall is available with a span of 16 and 21 metres to ensure perfect coverage of the riding area.

*Example:*

16 x 30 m, side height 4.40 m, solid aluminum frame, high-quality cover, windbreak netting at the sides, incl. large sliding gate.

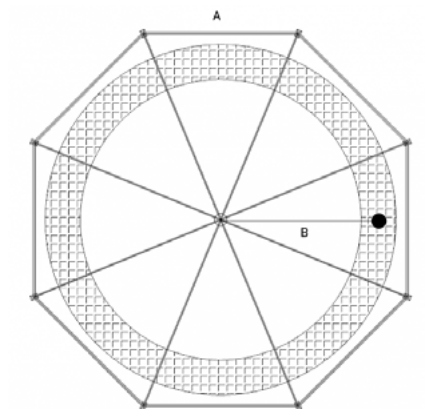

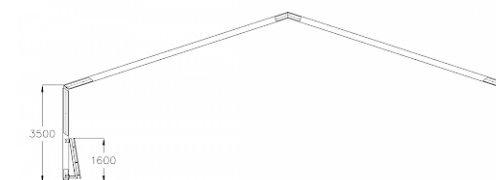

## Lunging Halls

Lunging halls from equitent are fitness and gymnastics rooms for horses. These tent systems allow horses to be exercised and trained in ideal conditions throughout the year.

*Example:*

Diameter 16 m, solid aluminum frame, high-quality cover, windbreak netting at the sides, incl. large sliding door.

#### PLANE SLIDING DOOR

Our riding and lunging arenas are equipped with a tarpaulin sliding gate as standard. With its low weight and the integrated guide rail with rollers, the door can also be opened and closed easily with one hand.

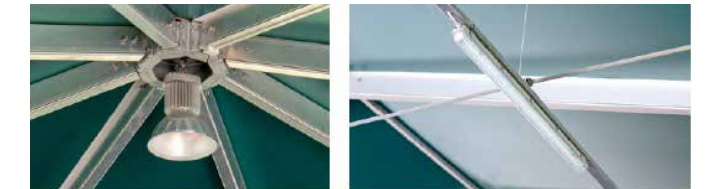

#### ROOF TARPULINS

We offer roof tarpaulins in the colours green and white. A green roof matches the wind protection nets and blends harmoniously into the natural environment. A white roof tarpaulin provides particularly good daylight and a pleasantly bright atmosphere. The PVC tarpaulin material is dirt-repellent and UV-resistant.

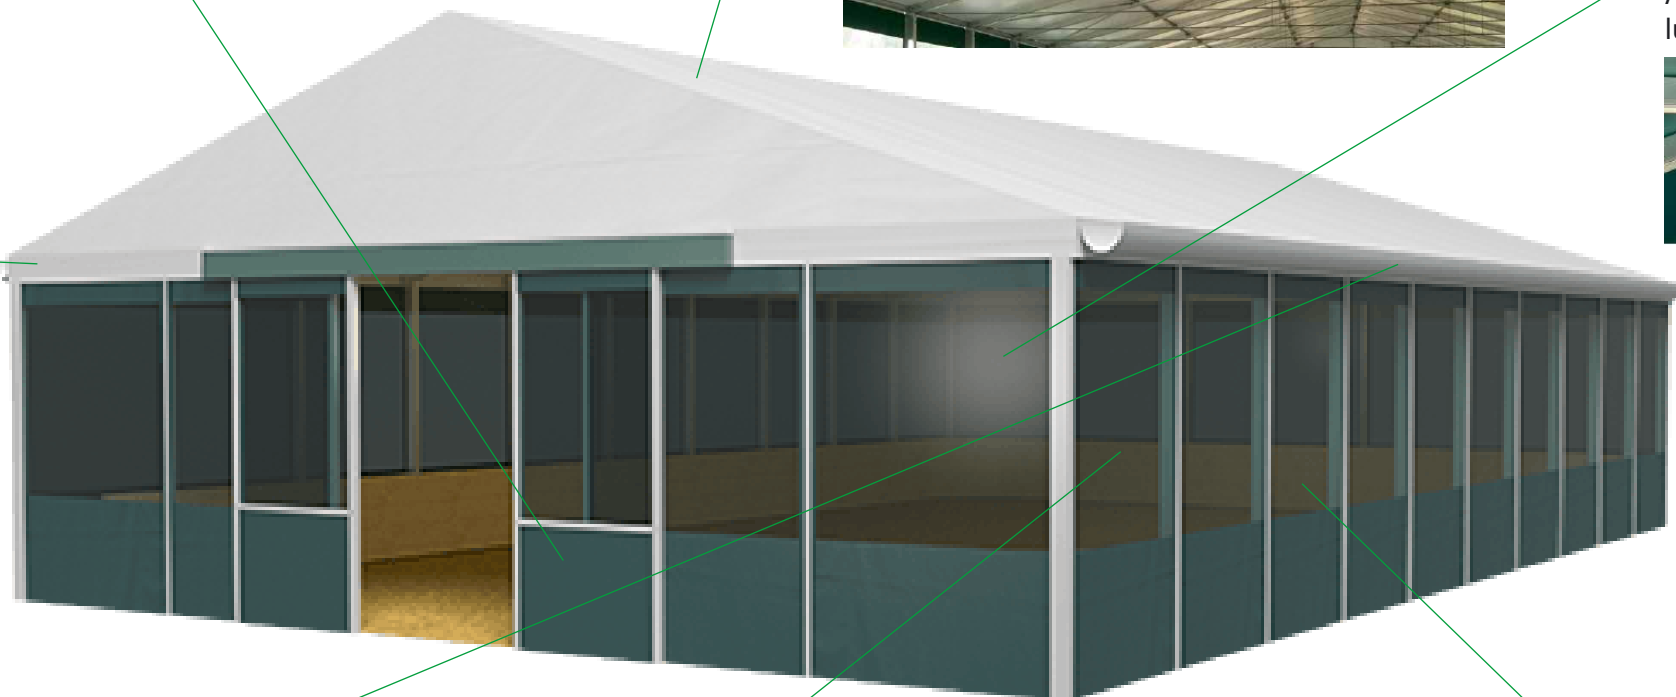

#### LIGHTING

At the customer's request, we equip the riding and lunging halls with innovativelighting systems.

#### ALUMINIUM SCAFFOLDING

The scaffolding of the equitent constructions made of aluminium profiles with four-groove piping technology enables versatile extension options. The combination with hot-dip galvanized steel parts ensures durable and long-lasting joints that can easily withstand extreme weather conditions.

#### WINDBREAK NETS

The side wind protection nets allow air and light into the hall and at the same time protect against insects, rain, snow and wind. The air can circulate optimally and the indoor climate is very pleasant, even during heavy use.

#### ROOF GUTTER SYSTEM

The riding and lunging halls can be extended with PVC gutters or a galvanised titanium version.

#### PANELS

The all-round wooden panels of the indoor riding arena can be released on one side to make room for a grandstand or storage area. For the lunging hall, a special belt gate with one-hand operation was developed.

## At Home in the World of Equestrian Sports

## Our Aim: 100% Satisfaction for Riders and Horses

” One reason why we opted for a tent construction is that it is difficult for us to obtain a permission for a solid outdoor building. [...] The tent erection was very straightforward. They promised that the hall would be put up in three days, and thats exactly what happened. We are now very satisfied with the result. We would definitely recommend it, and we would make the same decision again.“

” We simply needed the lunging hall for taking some of the pressure off the two riding halls. [...] I would definitely recommend Röder and their tent solutions. There are specific advantages [...], such as fast assembly. Additionally, working together with Röder was a wonderful experience overall and we are pleased with the Equitent product. The team that put up the tent was good and gave me excellent advice.“
