# MOST REQUIRED DESIGN TYPES

## THE RÖDER H-LINE marquee warehouse system – variable and durable

Perfectly meets the space requirements for service and industry: the H-LINE hall system is a storage and logistics solution that provides flexible space that can be adapted to suit any intended use. H-LINE hall systems are ideal for permanent use, but are quick and easy to set up – for installation they just need simple ground or screw anchors, wedge anchors, and spot or strip footings.

Span	10-40 m
Side height	4.2  5.2   6.2   8.2 m
Ridge height	10.17/11.17 for 40 m span
Max wind speed	Up to 100 km/hr.
Side covering	Fabric , trapezoidal sheet and sandwich panel, glass walls
Tarpaulin	PVDF COATED PVC FABRIC

## THE RÖDER S-TENT – impressive and luxury

Classical architectural solution setting trends in mobile tent and hall construction: the RÖDER Group's Solution classic event hall from the S-TENT series impresses onlookers even at first glance with its cubic shape and large window facades, which allow daylight to pour in and light up the inside of the hall. All of the materials used in the Solution classic meet the toughest of quality requirements, while its modular design allows ample scope for extensions and as much space as you need.

Span	10-30 m
Side height	4  6   10 m
Ridge height	4.48/7.34 m
Max wind speed	Up to 130 km/hr.
Side covering	Fabric, trapezoidal sheet, sandwich panel, plastic, aluminum, glass walls
Tarpaulin	PVDF COATED PVC FABRIC

## THE RÖDER B-TENT LARGE MARQUEE – classic and roomy

Whether for a successful trade fair exhibition, magnificent evening gala or energy-charged concert, the large tent from the B-TENT series leaves a lasting impression on event organizers and guests alike. This tent hall was designed according to DIN EN 13782 and features impressive tested stability and lots of opportunities for customization. Solid facade elements made of glass, aluminum or PVC can be installed in the large B-TENT as well as extensive lighting, public-address and air-conditioning systems.

Span	40-60 m
Side height	3   4   6   9 m
Ridge height	10.35-17.06 m
Max wind speed	Up to 130 km/hr.
Side covering	Fabric, trapezoidal sheet, sandwich panel, plastic, aluminum, glass walls
Tarpaulin	PVDF COATED PVC FABRIC

## THE RÖDER B-TENT BODEGA MARQUEE – great space with style

Even a large-scale event benefits from a stylish, elegant ambiance: the B-TENT Bodega large tent combines an extremely large amount of space with a rounded roof that copies a traditional Spanish-style vaulted cellar. With a clear span width of either 15 or 20 meters, the Bodega offers lots of space for evening galas, product presentations and sporting or music events.

Span	3-20 m
Side height	2.29/2.4/3/4 m
Ridge height	2.75/3.40/5.70/6.70 m
Max wind speed	Up to 100 km/hr.
Side covering	Fabric covering, trapezoidal sheet and sandwich panel, glass walls
Tarpaulin	PVDF COATED PVC FABRIC

# Areas of use

## INDUSTRIAL AND WAREHOUSE

---

Production buildings, hangars, storage warehouses, airport and cargo terminals

## COMMERCIAL & Offices

---

Stores, sales offices, showrooms, sales halls, kiosks, company branches

## SOCIAL PURPOSE

---

Hospitals, schools and structures for emergency situations

## SPORTS

---

Multi-sports complexes, tennis halls, basketball gyms, wrestling and fitness halls

## EVENTS AND FORUMS

---

Exhibition and presentations pavilions, event tents, checkpoints, temporary infrastructure

Versatile use of technology allows to create objects of any purpose, any complexity and in any region.

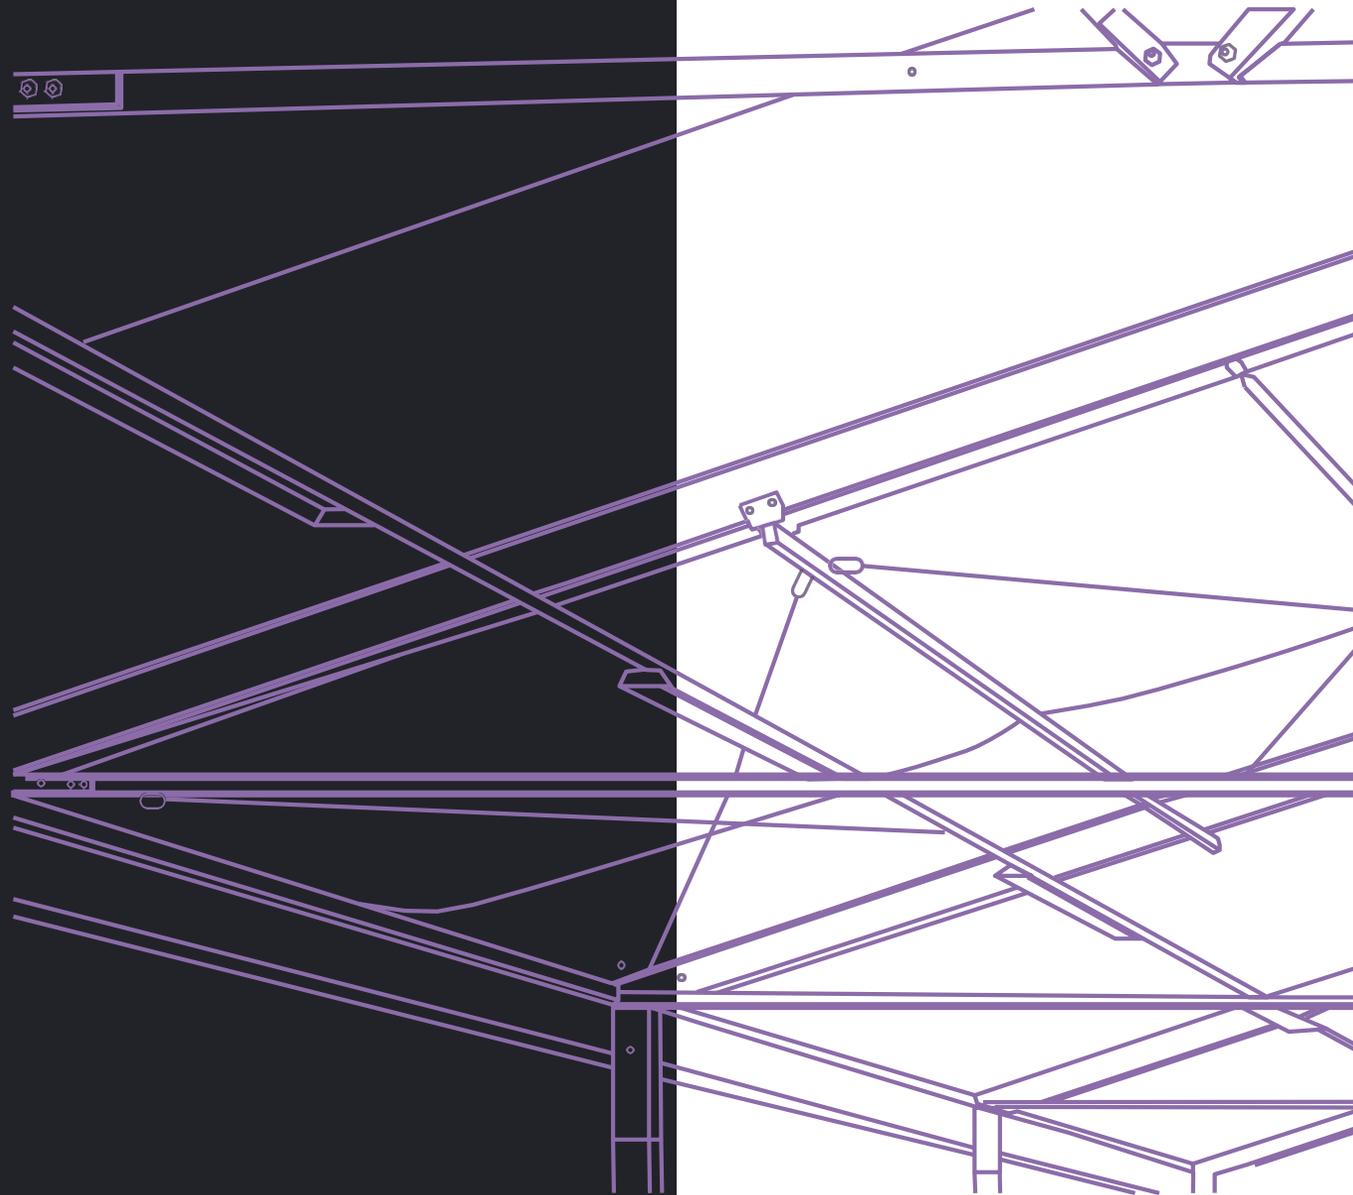

# Architecture

**Versatile hall systems are our backbone**

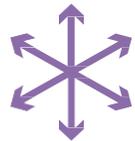

**But 60 years of experience make the difference**

RODER plan and design our constructions in direct contact with the customer in order to create individual project solutions. Due to the modular design and the light materials, intricate hall systems can be produced and are no less robust than conventional buildings.

# Esports Venue Shanghai

The world's first modular arena, specially built for Esports, was built by RODER China. The square hall with 55 m side length received a total area of 4,000 m<sup>2</sup> due to the installation of high-parterres. Thanks to special profiles, the beams have a total load capacity of 30 tons. The construction lasted only 17 days, the entire construction time including on site was 45 days. In addition to Esports, the Arena has already been used for various other events.

# World Artificial intelligence conference

RODER China installed an exhibition center on an area of more than 7,400 m<sup>2</sup> for the World Artificial Intelligence Conference. The gable sides with frameless vertical glass panel facades are the eye-catchers of the innovative hall ensemble. The three impressive pavilions with a ridge height of 15 m are connected by steel roofs in wood look and are now available for conferences and exhibitions.

# Wuzhen art exhibition

For the International Exhibition of Contemporary Art, Roder China has built an event hall SOLUTION 30m x 40m with a height of 10 meters for special works of art. The impressive construction, which at the same time had a delicate appearance due to its aluminum-glass façade, put the interior art installation in the right light. Situated directly next to a lake, the inviting glass facade was the perfect combination of the artwork and the Chinese “water village” Wuzhen.

# Hurricane Festival

The Hurricane Festival is one of the biggest music events in Germany. RODER Germany created an architectural highlight: not your average event tent, but the VIP event tent SOLUTION PRIME with three floors and integrated bar. The construction included a terrace from which the guests had the best view directly to the stage. The triple-deck tent with its spacious balconies is the perfect solution for events, festivals and concerts.

# CFLD Theatre

A very futuristically clad SOLUTION CLASSIC XL 30m x 35m and 10m side height was built in 20 days as a fully equipped theatre. The inflatable façade cladding of almost 800 air-filled cubes created a striking look for the huge theatre building. In phase 2, the size of the theatre has been expanded to a 30m x 70m structure.

# Events and forums

# Our agile and reliable structures can be tailored to work perfectly for your next event

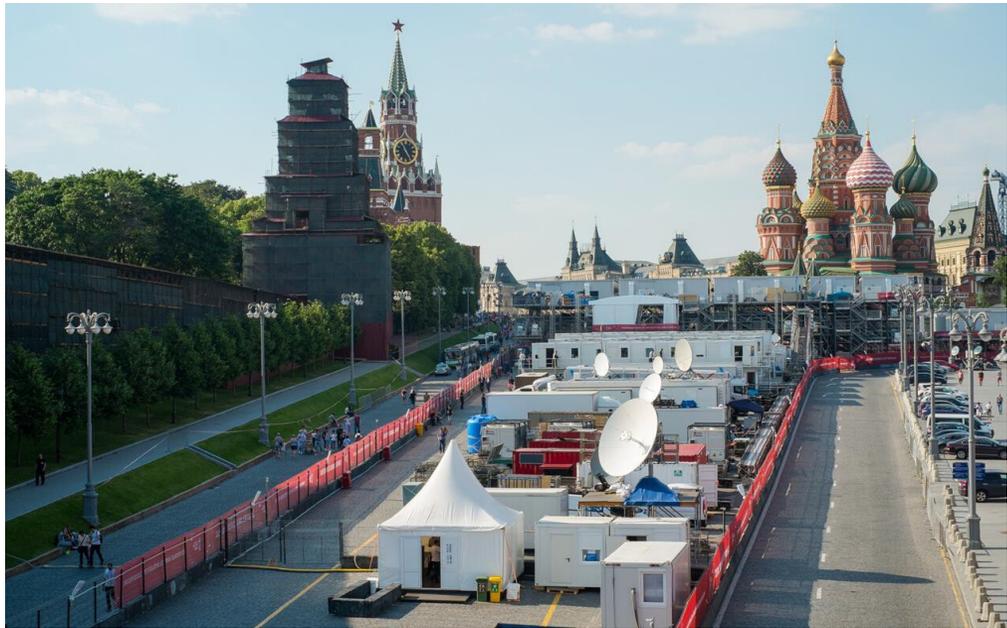

We support our customers at events, sports events, festivals, concerts and trade fairs around the world.

Events live on emotions. In order to create these among the visitors, it is necessary to think outside the box – and to push the technically feasible to the everyday as far as possible.

# FIFA WORLD CUP 2018 Russia

RODER Russia provided complex construction of temporary overlay in 9 Russian cities: fan zones in 3 cities (include Moscow), stadiums security perimeters in 7 cities, checkpoints, broadcast area on Redsquare, training base for Brazilian team, brand shops, ect.

# Beach Volleyball Major Series

At the international Beach Volleyball Major Series in Vienna, the RODER construction team created an impressive party location on the Danube Island. In order to allow fans and VIP guests the best view, the double storied event hall 30 m x 50 m received a large covered terrace, galleries inside and an impressive balcony. Nearby, further exclusive event halls and vending tents on 2,200 sqm of space also invited guests to dwell, shop and enjoy.

# BMW OPEN

## Shanghai

The BMW OPEN Shanghai needed a custom made three story VIP marquee at the 18th hole. The construction had to be installed and dismantled every year. It also needed to be safe enough to accommodate a couple of hundred people. RODER China installed a Triple-Decker 20 m x 30 m with 12 m eave height. A ground terrace and a balcony in the 3rd floor allowed the best view on the sporting events at the 18th hole.

# Formula E Berlin E-Prix

For the Berlin E-Prix RODER installed Europe's largest continuous double-deck tent with 185 metres as an impressive base for all drivers, teams and vehicles at this major sports event. Inspired by the future of motor racing the 80 RODER employees installed the structure in record times. In just 10 days it was erected to be "ready to race" for this huge event on the Tempelhofer Feld in Berlin, including sponsor brandings and supply infrastructure.

# Engineered in Germany

**MADE BY**

“Engineered in Germany” and “Made by RÖDER” are a performance promise to our customers and for us as a premium supplier.

High-quality materials paired with German engineering make our buildings an equally durable but far more cost-effective alternative to a solid structure. In the main we would like to be your competent partner in every step, from the first concept to the organization of all TÜV approvals and fire protection tests right through to dismantling.

Productions facilities are located in four countries (Germany, Turkey, China and Russia). We also produce door sets, facade systems made of aluminum, plastic, glass and ISO-panels, stairs, catwalks, etc. Custom engineered aluminum constructions are also possible.

A large structure storage area is located in Dubai, which will provide fast logistics to the construction site.

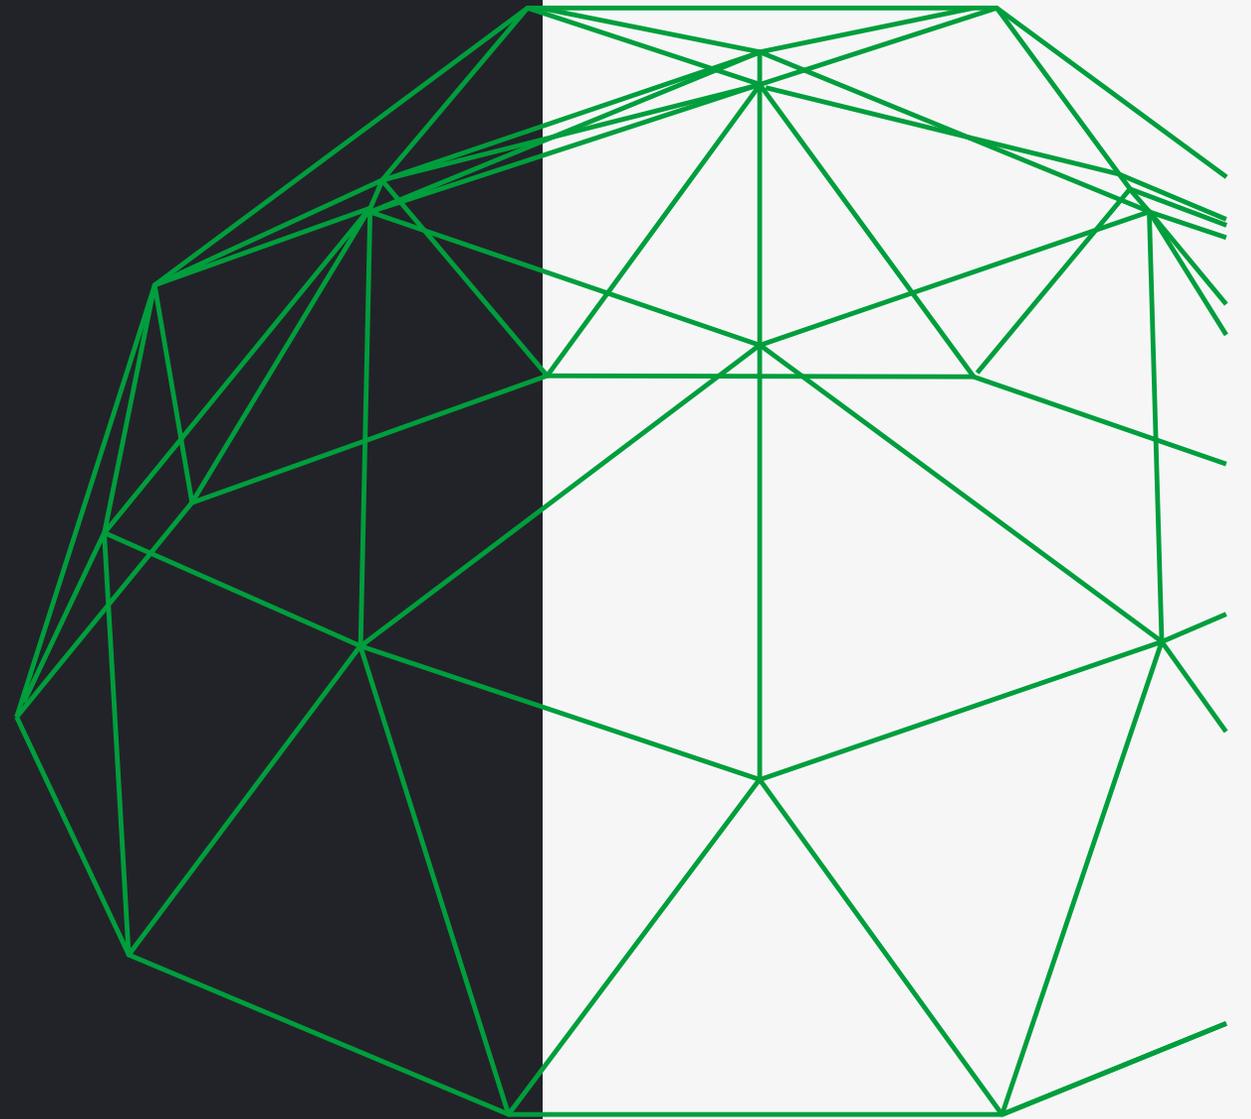

# We are committed to being environmentally friendly and sustainable

The RÖDER Group is certified according to European standards EN ISO 9001:2015 and EN ISO 14001:2015 as well as EMAS, the world's most demanding system for sustainable environmental management. The in-house production control for the execution of steel and aluminium structures is certified according to DIN EN 1090-1.

All of our structures are inspected by TÜV for their design, structural integrity and planning – all statics of RÖDER constructions are calculated and tested according to EN ISO 13782

# EMAS

Certified Sustainability

**The RÖDER Group is committed to a responsible use of resources across all company areas**

The environmental management system's eco-management and audit program certifies environmentally-aware working methods, the use of climate-friendly processes, the sustainable use of resources and the willingness to continually improve environmental performance of the future.

The aim of the EU's EMAS scheme is to help organisations and companies to operate in an environmentally and resource-friendly manner without losing their competitiveness.
